Help

Thank you for purchasing the mini golf courses with 38 modular course parts. The course parts are game ready prefabs, all of them on a single 512x512 diffuse texture map in .PNG format. Polygon count: 100 - 350 Prefabs: 34

All elements can be easily combined with each other to create an endlessly long golf course for your game.

In the Textures folder there are respectively three different color themes available for you to choose from. To change the theme, simply replace the texture on the material in the Materials folder
